

The project

All the money earned from this project will be going to the National Wildlife Federation!

Feel free to send us community photos of your plant at leo.lue@aasuccess.org or aashee.balani@aasuccess.org

The Go-Green Project

Why Plants?

Individually, one of the easiest and enjoyable ways we can reduce pollution is by growing plants. Nurturing more green material helps purify the air, reducing the effects of pollution on our communities. Not only that, they provide nourishment for entire food chains (including us). So if we want our planet to last, everyone has to start helping somehow. And in the Go-Green Project, we trust that plants can be your somewhere.

How YOU can take action

1. Eat "greener"

By simply eating less meat you can make an impact! Red meat has the most effect on the environment. When you buy beef look for "Grass Fed" as it is a better option.

3. Bike or hike

Cars release an INSANE amount of carbon emissions. Biking is a great eco-friendly option. Not only is biking efficient, it also gets you great exercise!
